Cedar Acres

Gladioli

*“Uprightness — standing for truth like a tower;
Dignity — symbol of honor and power;
Beauty — that blooms in the ultimate flower!”*

Never since the fields at Cedar Acres were opened to the public have so many interested flower lovers visited the fields and show rooms as during the season of 1919. Strong evidence of a renewed interest in flowers and in a desire to have them and to work with them. These same comforting flowers are never in a hurry, never tired if properly tended and nourished, always teaching lessons of contentment and faith in the eternal laws governing their growth.

Constant association with such agents of happiness soon makes the garden a necessity. New colorings, new plantings, new combinations, give zest each season, until gardening in all its alluring phases is as essential as fresh air and sunshine.

In presenting our 1920 booklet we trust you will find something among its pages to help and give added pleasure to your garden activities.

FOR several years fashion or vogue in flowers has been as pronounced as in clothes or furnishings. At Cedar Acres, the past season, purple and gold were in great demand.

Fortunately, in our borders we had plantings of purple and gold Gladioli with purple and gold Salpiglossis. At the base, to cover the earth and give added beauty, were carpets of purple Verbena, purple phlox, blue-purple petunias, and here and there a touch of pink Verbenas. Blue Salvia and gold celosia were among the unusual things growing near standard Heliotrope. Rising in the background, green bushes of Buddelia were covered with fragrant trusses of lavender flowers.

In the show room these same colors found expression in harmonious arrangement, for by mere chance we were able to satisfy the demand by the use of flower containers in the same tints.

Some other color may be the popular one the coming season, but it is gratifying to know that whatever the call, the Gladiolus will respond to almost any demand. All who grow them know there is no other garden flower gives such a limitless array of color and shade, in such usable form.

At Cedar Acres you will find whole fields of color melody, and this same melody goes out to the world in bulbs for your friend's garden, for your own garden, or in blooms from your own garden. Letters from customers tell us of the pleasure derived from gift boxes of flowers and bulbs, and we know that added pleasure will be given those who enjoy sending these boxes.

Gladiolus Amethyst, now a prime favorite, was used most effectively with Pink Perfection. We know of no flowers but tulip

La Rêve, and a few chrysanthemums, which have the coloring of Amethyst. The soft heliotrope, suffused rose, is always well placed when used with the creamy buff of Niagara or Loveliness. Amethyst or Prince of India with Baron Hulot make a truly Persian combination.

Gladiolus Mrs. Francis King, Liebesfeuer, Pink Perfection, Crimson Glow and Independence, glowing red and rose and pink, in stately four root spikes, were quite the most glorious tribute to the gardener's art that ever went from our show rooms. They are equally gorgeous as a planting.

The exquisite coloring of White Glory with Baron Hulot is hard to describe. Chaste, cool and lovely, it needs only to be seen to be desired. Almost equally lovely is Iris Spray, the new lavender, with Day-break, lovelier as it fades, or with the rich cream of Niagara.

The soft yellow of Yellow Prince and the clear iris blue of Jacinthe make a most effective combination for vase or gift box.

Gladiolus Mrs. Dr. Norton is quite alone in its beauty. No other variety equals this in its class — silvery whiteness — with the dainty pink touches on the tips of petals. It is more like a veiled silvery pink.

There are combinations to the end of the chapter, but the lover of nature needs no written guide. To copy is enough.

The Primulinus Hybrids were increasingly beautiful and popular last year. The exquisite beauty of these Gladiolus butterflies is difficult to describe. In form and color no other flower quite equals them. Smaller than the other types of Gladioli, the daintiness of form and arrangement on the graceful spikes add to their decorative value. They are not found in many florists' shops,

for they are not the "big pumpkins" demanded by those who want quantity. Yet they are the coming Gladioli. No two spikes of bloom are just alike and each seems more beautiful than the last. Colors ranging from the lightest primrose, through apricots, yellows, orange and bronze, to deep rich rose and reds, all placed together in one vase, give a startling picture of nature's work of art. This year we are offering them in mixtures of all colors, also in selections of shades of apricot and yellow, or rose and bronze.

We have as a basis for our unqualified praise of these Gladioli, the fact that almost every order for flowers or bulbs includes *Primulinus Hybrids*. They are, without question, unequaled for forcing.

The small blooms of the *Primulinus* specie, just as it grows in South Africa, are now in great demand, and large plantings are made in the cutting garden, or in clumps in the hardy borders. These are quite the daintiest yellow blooms obtainable in mid-summer.

In buying bulbs, do not always select the largest bulbs. You lose the cream of the stock offered. Many of the choicest varieties do not produce large bulbs; the large bulbs may prove to be "blind," past blooming age. Size is not virtue, but it is essential that the bulbs should be of blooming age, fully developed and healthy, rather than large and overgrown, punky and soft.

It must also be remembered that one who makes a specialty of producing can naturally give greater satisfaction to customers.

We have tried out several thousand varieties, but list only those which we know will give perfect satisfaction. No new variety will ever displace those Gladioli which

have been so popular for years. New sorts are, however, well worth trying. If it is necessary to be mindful of expense, it is still possible to have a wealth of bloom for all purposes from the mixtures, which are sure to give satisfaction. But if money is no bar, no collection or garden will be quite complete without Crimson Glow, Iris Spray, Alice Tiplady, Mystery, Amethyst, Prince of Wales, Sunset, Hortense, Jacinthe, Wistaria and Daybreak, Wilbrink, L'Immaculee, Mrs. Watt and the newest lavender, Conspicuous.

For the novice, we emphasize the rule to plant for cutting in the vegetable garden, where better results are obtained, unless one has large space in the formal garden, or in the borders. Also to cut the flower stalks when one or two buds have opened and allow further development in the house.

We repeat the invitation to visit the show rooms and the packing rooms. The flowers in the fields are interesting, but very much more so when shown in arrangements which have helped to popularize this garden favorite.

Growing the *Gladiolus* is a business at Cedar Acres, the gorgeous flowers live with us in a very intimate and personal way. We have grown to love them, knowing all the joy and charm they hold. We want them to live with you and are very willing to give you all the help of our experience. It will not be necessary to teach you to love them.

We invite any criticism or suggestions which may improve the service we wish to give our customers.

Mixtures

We do not change the names of our mixtures from year to year, but the varieties do change, as each year new ones are added, making them the best that can be offered.

Amateur Mixture includes all the best varieties selected from the collections of the best hybridizers and growers of both American and European countries. All varieties have been selected with a view of eliminating all colors which do not harmonize either in cut flowers or garden planting, giving a most interesting and satisfactory mixture to grow. \$5 per hundred, \$40 per thousand.

Cedar Acres Mixture contains an endless variety of color, striped, variegated, mottled, as well as a fine selection of clear colors, with beautiful throat markings. In fact, the variety is unlimited and is sold at the low price of \$3 per hundred, \$25 per thousand.

Cedar Acres Seedlings. These introductions have been awarded numerous gold and silver medals and Certificates of Merit, and to induce large plantings of these seedlings, we are offering blooming size bulbs at the extremely low price of \$2 per hundred, \$18 per thousand.

Florists' Prize Mixture is the product of seedlings and selection, made up entirely of light colors, whites, creams, light rose and delicate pinks, and a great many with beautifully marked or penciled throats. These are most desirable, as the colors harmonize so well and give just the needed touch of effect for house or garden use. A mixture of exclusive quality, \$3 per hundred, \$25 per thousand.

No orders for these mixtures taken for less than twenty-five bulbs. Twenty-five at the hundred rate; 250 at the thousand rate.

Cultural Directions

The Gladiolus is a flower of easy culture and does well in any soil, but should be planted in full exposure to the sun. They will do well planted in the hardy borders or in front of shrubbery. Many of the best varieties produce small bulbs, and in buying a mixture you will find it much better when the size of the bulbs varies to a considerable degree. The largest bulbs do not always give the best results. It is essential that the bulb should be of blooming age rather than size. Soil should be well prepared in the early spring, with a good coating of agricultural lime and bone meal thoroughly worked into the soil, but fresh stable manure should be used only where the ground may be manured the previous fall and well worked over in the spring before planting.

The various ways in which the Gladiolus can be planted make it one of the most showy and attractive garden flowers. Planted in round, oblong, or square beds, planting bulbs from four to six inches apart, so that they may be weeded and hand-hoed, they will give a wealth of color not equaled by any other flower.

Plantings for cut flowers should be made in rows eighteen inches apart, with bulbs three inches apart in the row, covering from four to six inches, according to the size of the bulbs; press the earth firmly around each bulb. Care should be taken to plant the bulbs right side up, and deep enough so that the new bulb, which forms on top, will not be pushed too near the surface. For succession of bloom, plant from the time the ground can be worked until July 1.

After the spike begins to show, all weeds should be removed, and if the soil is kept thoroughly worked, watering will hardly be necessary; they are great drinkers, however, and respond quickly to water. Always water after sundown.

There is no finer garden flower, but the finest specimens are shown if the spike is cut when the first bud opens and allowed to develop in the house; every bud on stalk

will open and the richest colorings result; this is also a benefit to the bulb. The flower-loving public must be educated to a willingness to cut the spikes when they have bloomed a little while in the garden, then to finish their development in the house. Nothing is more unsightly than a mass of ragged, betasseled Gladioli, when it is so easy to pick off the withered blooms.

In cutting the flower spikes, it is ruinous to cut the stalk where the flowers end. There must be some foliage to lend grace. Cut the spikes so as to leave two or three leaves on your bulb root, thus giving you a flower spike sometimes nearly four feet long, leaving plenty of strength for the bulb, and beauty for the decoration.

In shipping cut blooms of the Gladiolus, it is absolutely essential that they be shipped dry, after standing for a while in water.

A great many varieties do extremely well under glass, and any one having a greenhouse should by all means force some of those varieties marked with an asterisk, allowing from twelve to thirteen weeks from planting to blooming time, with a temperature of about fifty-five degrees, or in carnation beds.

Bulbs should be dug as soon as the foliage turns brown or is cut down by frosts; cut stalks close to the bulbs. If possible, allow to cure in the sun or in a cool, dry place, then, removing old corm, store in trays or baskets, in a temperature as near forty degrees Fahrenheit as possible.

The above illustration shows the bulb as it looks when you dig it. The bulb you planted in the spring dies away and the new one forms on top, so that it is nearer the surface than the original planting.
